First Arctic, Antarctic & North Pacific Mapping Meeting, October 8-10, Stockholm

Current grid: Version 3.0, released Spring 2012
 Resolution: 500 x 500 m, Polar Stereographic Projection
 Release article: GRL, 2012 (689 citations, Nov 9, 2019)
 Mapping Statistics: 11 % mapped with multibeam at the 500 x 500 m resolution, **6.6 % at Seabed 2030 resolutions**
 Current map: Based on version 3.0, completed 2015

Editorial Board Version 3.0

- Bernard Coakely (USA)** University of Alaska Fairbanks
- Julian A. Dowdeswell (UK)** Scot Polar Research Institute, University of Cambridge
- Steve Forbes (Canada)** Canadian Hydrographic Service
- Boris Fridman (Russian Federation)** Moscow Aerogeodetic Company
- Hanne Hodnesdal (Norway)** Norwegian Mapping Authority, Hydrographic Service
- [Chairman] Martin Jakobsson (Sweden)** Stockholm University
- Larry Mayer (USA)** Center for Coastal and Ocean Mapping/Joint Hydrographic Center, University of New Hampshire
- Riko Noormets (Norway/Svalbard)** UNIS, University Center of Svalbard
- Richard Petersen (Denmark)** Danish Geodata Agency
- Michele Rebesco (Italy)** Istituto Nazionale di Oceanografia e di Geofisica Sperimentale (OGS)
- Hans-Werner Schenke (Germany)** Alfred Wegener Institute for Polar and Marine Research (AWI)
- Yulia Zarayskaya (Russian Federation)** Geological Institute of Russian Academy of Science

THE INTERNATIONAL BATHYMETRIC CHART OF THE ARCTIC OCEAN (IBCAO)

IBCAO 3.0

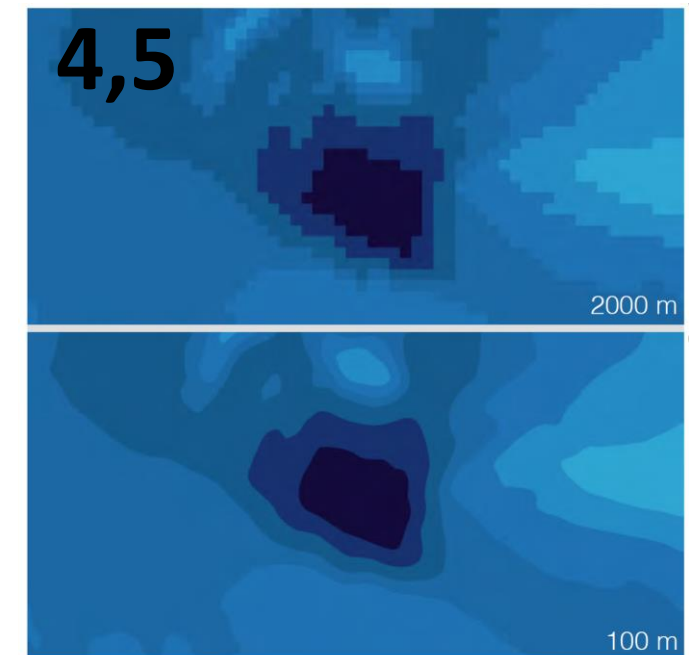

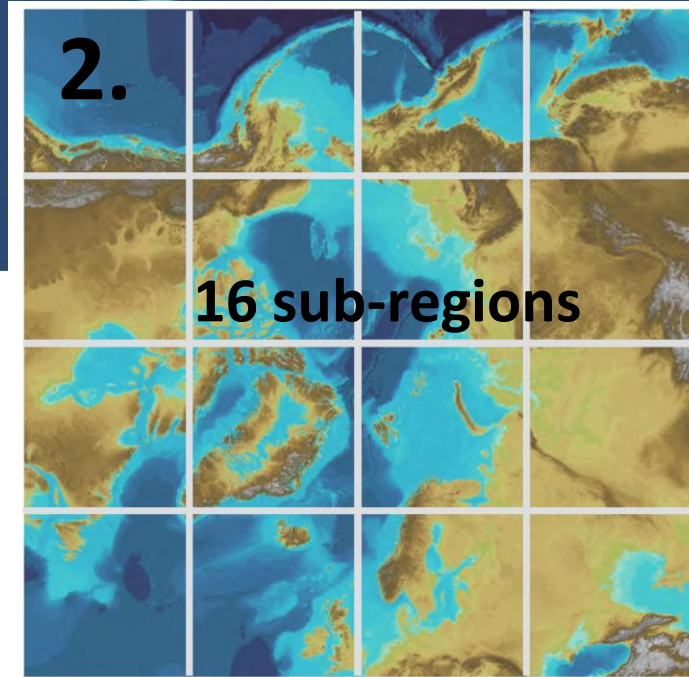

IBCAO 3.0 is the first global bathymetric chart of the Arctic Ocean, providing a comprehensive and consistent view of the Arctic seafloor. It is based on a 500 m resolution grid and includes data from multibeam echosounders, single beam echosounders, and satellite altimetry. The chart is available in both digital and printed formats.

IBCAO 3.0 is a product of the International Bathymetric Chart of the Arctic Ocean (IBCAO) project, which is a collaborative effort between the International Hydrographic Organization (IHO) and the International Geophysical Commission (IGC). The project is supported by the International Oceanographic Commission (IOC) and the International Council for the Exploration of the Sea (ICES).

IBCAO 3.0 is a significant milestone in the history of Arctic bathymetry, providing a comprehensive and consistent view of the Arctic seafloor. It is a valuable resource for scientists, navigators, and policymakers alike.

Gridding

1. Process and format all data into XYZ on Polar Stereographic projection, MSL
2. Tile the domain into 16 sub-regions
3. Run block median filter (100 x 100 m cells)
4. Grid at 2000 x 2000 m resolution using GMT surface spline in tension
5. Resample to 100 x 100 m resolution
6. Add high-resolution data using Remove-Restore algorithm
 1. Block median at native resolution
 2. Resample at 100 x 100 m resolution
 3. Density filter
 4. Calculated the vertical difference between the 100 x 100 m resolution and 2000 x 2000 m grids
 5. **Grid the differences** at 100 x 100 m data with GMT surface spline in tension
 6. Add the gridded differences to the over sampled low resolution grid
7. Resample 100 x 100 m to 200 x 200 m

Gridding

1. Process and format all data into XYZ on Polar Stereographic projection, MSL

 5. **Grid the differences** at 100 x 100 m data with GMT surface spline in tension
 6. Add the gridded differences to the over sampled low resolution grid
7. Resample 100 x 100 m to 200 x 200 m

+

Q&A tool to analyze gridding results and report errors

Developed by Rezwann Mohammand, Seabed 2030 Regional Centre, Stockholm University

Functionality:

1. View and compare gridding results
2. Show data coverage
3. Report errors

It is a tool developed to be used in the process of compiling new grids
